## **DETAILED ACTION**

### ***Election/Restrictions***

1. A review of the record indicates that the Examiner had inadvertently mailed an incomplete, draft version of the restriction requirement. The intended version—further including the requirement for the election of one of species IA-IC—is set forth below. This restriction requirement supersedes and replaces the previous Office correspondence. The Examiner apologizes for any confusion or delay.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I.** Claims 1-52 and 85-93, drawn to a semiconductor device, classified in class 257, subclass 431.

**Species IA:** The species of the device directed towards a 4-transistor CMOS active pixel sensor;

**Species IB:** The species of the device directed towards a 3-transistor CMOS active pixel sensor;

**Species IC:** The species of the device directed towards a CCD image sensor.

- II.** Claims 53-84, drawn to a method of making a semiconductor device, classified in class 438, subclass 1+.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be

Art Unit: 2815

used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by a materially different method such as by forming the active area extension region in the substrate prior to forming the adjacent first transistor gate stack.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. This application contains claims directed to the following patentably distinct species of the claimed invention, set forth above as species IA-IC.

If Applicant elects invention I, Applicant is further required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, various claims are generic. Claim 1 is generic to Species IA and IB.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 2815

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
